- One-touch activation keys
- Full, force, stay, instant and automatic arming methods
- 16 wireless zones
- 16 users
- 16 remote controls
- 256 events buffered

Consumer Features

Magellan is the first security system to combine security with popular consumer features and a stylish design. Magellan looks different than anything else in the security industry. Install it anywhere in your home or small business, Magellan blends beautifully with any décor. Listen to music, leave a message or use your system as a telephone, alarm clock or monitoring device. With Magellan you have security and so much more!

Built-In FM Radio (model 6060 only)

*“ My radio plays when I’m not home so
it sounds like someone is always here ”*

Listen to your favorite radio stations with Magellan’s built-in FM radio. With its crisp quality sound you can listen to music and store up to 15 radio stations in memory. The system can have your radio turn on automatically whenever you arm your system to make it sound like someone is always home.

Hands-Free Telephone (model 6060 only)

Your security system can be used as a hands-free telephone. Dial out or answer incoming phone calls by using Magellan's built-in speakerphone.

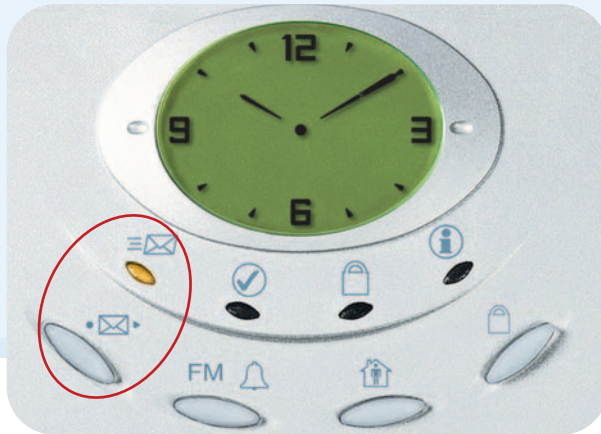

High Quality Voice and Sound

*“ 30 seconds before arming...
20 seconds...10 seconds...”*

Have your system status provided to you in a clear, crisp voice using digital 8-bit sound. Don't memorize zones—Magellan's voice assistance will tell you if your front door is open. Magellan can also give you a vocal countdown to let you know how long you have before your system is activated. Select music or your standard “beep” sound for all delays—both of which can be programmed with Magellan's user-friendly menus.

Family Message Center

*“ Hi mom, I’ve gone to the park to
play soccer with Johnny ”*

Use your security system as a message center to leave a reminder or note to someone coming home later. You can record your message with one touch or you can call Magellan from any phone to leave a message. A flashing light indicates that a message is waiting—just push a button and listen to your message in a crisp, high-quality voice.

Receive System Status 3 Ways

With Magellan you can check your system status 3 different ways. Have your status told to you by voice, text message or a flashing light.

Access System Features by Phone (model 6060 only)

“ Welcome Janice. System armed. ”

You can call Magellan from wherever you are to:

- Have your system status confirmed to you in a clear voice
- Arm or disarm your system
- Listen to what’s happening in the room where Magellan is installed and actually speak to anyone that’s there too
- Activate or deactivate an output, like your lights and heating
- Leave a voice message in the family message center

Step-by-Step Guidance

“ Please record after the tone ”

Each screen tells you precisely what to do and continually assists you with vocal instructions. Even if you’ve never owned a security system before, Magellan is designed to give you simplicity at its finest.

Installs Anywhere

Entrance, desktop, bedside table— your kitchen counter if you wish, Magellan goes absolutely anywhere. With only power and phone wires to connect and no holes to punch in your wall, Magellan is one of the easiest, quickest and most cost-effective systems to install. Plus, if ever you decide to move, your system can move with you.

Alarm Clock

Set Magellan's fully featured alarm clock to wake you by beeping, playing a selectable tune or turning on the radio—it's easy, Magellan can sit right on your bedside table. And don't worry, there's a snooze button for those early mornings too!

Home Automation (X-10)

“ We set the air conditioner to come on everyday so our apartment is cool by the time we get home ”

With Magellan's X-10 home automation support you can control your home's lights, heat, air conditioning and almost any other compatible product.

Chiming

“ Now I know if my four-year old wanders out of the house as soon as she opens the door ”

Set Magellan's chimes to sound as soon as your door opens. You can choose between selectable tunes, voice or beeping to notify you of such an action.

Remote Control Operation

Use your remote control buttons to automate your most frequently used security functions like arming and disarming. Use one of the other buttons as a panic signal or as a controller for your lights and garage door.

Reputed Security

Magellan consists of wireless detection devices installed at specific entry and exit points, as well as other vulnerable areas, such as windows. These devices protect the premises and communicate with Magellan's main console. If you have armed the system and a device detects a breach, a siren will be activated and your central station will immediately be notified by phone.

Choose from wireless motion detectors that are immune to pets, door contacts, and remote controls that automate your most frequently used security functions. Magellan is perfect for securing your home and small business.

Hands-free, Two-Way Communication with Monitoring Station (model 6060 only)

*“ Hi Patrick, it's Karen from ABC alarm
company— do you need any help? ”*

Magellan features a hands-free speakerphone that allows you to speak directly to your monitoring station, and them to respond to your needs, as soon as an alarm occurs.

Voice Reporting

“ Alarm at Paul’s house ”

“ Helene, there’s a medical emergency, would you come over? ”

Magellan can call you or someone you choose on up to 2 different telephone numbers and play a personalized voice message to announce that an alarm has occurred or that someone has used their remote control to signal a medical emergency. If you receive a voice message, you can press a button on your phone to communicate with the person in need through Magellan’s speakerphone. And with Magellan’s user-friendly menus it’s easy to set phone numbers and record personalized voice messages.

One-Touch Emergency Keys

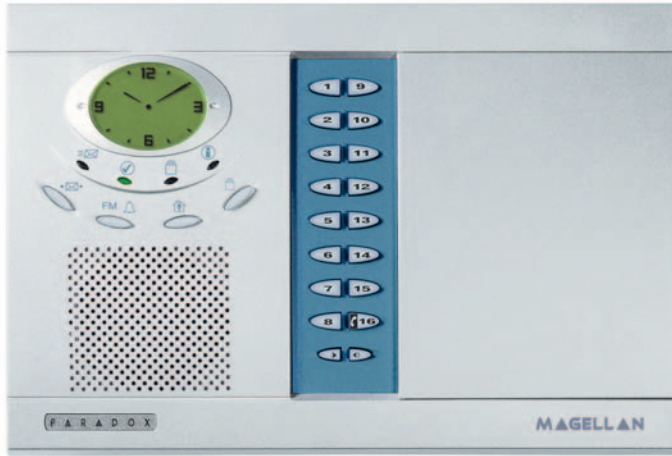

“ If grandma needs help all she has to do is push the emergency key ”

Magellan has one-touch emergency keys designed to give you immediate assistance, should a situation occur.

One-Touch Activation Keys

There’s nothing worse than having to remember complicated codes in order to navigate your security system. With Magellan, all your major functions are accessible with the touch of a button. To arm your system, push “arm”—it’s as simple as that.
